

### What you need!

- Cake Tin
- Grease Proof Paper
- Cake Release or Bake Easy Spray
- Pencil, Ruler, Scissors

### Step 1

Place your tin onto some greaseproof paper & draw round the base of your tin with a pencil.

### Step 2

Cut the shape out. Now cut some long strips for lining the sides of the tin making sure they are about 1.5cm deeper than the depth of the tin. Make a fold about 1.5cm deep along the strips.

### Step 3

Make small cuts up to the fold about 1.5cm apart.

### Step 4

Grease the tin thoroughly and place the side strips inside the tin making sure the folded edge sits flat on the base of the tin. The small cuts will allow the greaseproof to sit neatly. If you need more than one strip, overlap them slightly until the whole inside is lined.

### Step 5

Lastly place the base liner into the tin. For best results carefully grease the lining paper.

*Handy Hint: For ease and quickness, grease the tin with Cake Release which can be brushed on or even easier, try Bake Easy Spray!*
